

CMPDI CBM & UNCONVENTIONAL GAS AUDIT - Singrauli Deep

Resource Assessment & Reservoir Characterization (2023)

Official Publication | Published by Ministry of Coal & CMPDI Ranchi | Date: 11 September 2026

Hydrogeological characterization and gas-in-place (GIP) assessment for Coal Bed Methane (CBM) in Singrauli Deep during 2023.

Deep Barakar coal seams at depths between 450m and 850m were evaluated for gas content, matrix sorption capacity, and reservoir cleat permeability.

Estimated gas content averaged 9.8 to 14.2 m³/tonne. Commercial dewatering simulations indicate potential peak gas production rates of 6,500 m³/day per stimulated vertical borehole.
