1. Executive Summary

Synthesis Response: Verification Test Report

Direct Document Evidence:

- > **Evidence 1:** Monthly Coal Logistics, Railway Evacuation & Pithead Stock Report
- > **Evidence 2:** During FY 2023-24, total Composite Overburden Removal (OBR) achieved was 1,650.40 M.Cum, representing an expansion of 21.6% over the previous period. The company-wide average stripping ratio stabilized at 2.48 m3/t. High stripping ratios were observed at WCL (4.21 m3/t) and BCCL (3.85 m3/t) due to deep-seated seams and steep strata inclination. Conversely, MCL maintained the lowest operational stripping ratio at 1.18 m3/t in its Talcher opencast corridor, yielding prime high-volume non-coking thermal feed (Grades G11 to G14).
- > **Evidence 3:** 3. Detailed Project Reports (DPR) & Mine Feasibility Studies
